Citizens Determined Flu Shall Not Spread

**CITY OFFICIALS ARE ASSURED THAT SPIRIT OF ORDER
WILL BE OBSERVED—STREET CARS BEING FUM-
IGATED DAILY AND WILL CONTINUE
TO RUN—17 NEW CASES**

"The flu shall not spread."
Saskatoon is as a unit in its determination to do everything possible to prevent Spanish influenza from becoming as serious an epidemic here as it has in many other Canadian cities. Over a hundred citizens called up the mayor and assistant-commissioner this morning regarding the action of the council in closing all public meetings and the schools, and of that number only one person registered a complaint. All of the others complimented the city officials upon their action and promised to see that the spirit of the order was lived up to in its entirety.

There has been no deaths from influenza in Saskatoon today. One death from this cause in Colonsay was reported to a Saskatoon undertaker late this afternoon. It was Wm. K. Brown, merchant. Funeral at Colonsay, Oct. 19.

Won't Stop Street Cars

"We do not consider it necessary to stop running the street cars yet," said G. D. Archibald, city engineer, when he was told that such a measure had been taken by the civic authorities in Philadelphia. "We are fumigating the cars every night and spraying them thoroughly with formaldehyde and other disinfectants. People are asked to allow the windows to remain up so that a better ventilation may be had. I do not believe the street cars a very grave source of danger as regards contagion. In Philadelphia it is different, as people remain on the cars for a long time. Here they only take short rides, and the risk they run in doing so is not very great."

While only one death has been reported in the city up to noon today, the fact has been brought to light that the spread of the disease in the city has been much greater than had been suspected. After the conference which the mayor held with the medical men of the city yesterday afternoon over thirty cases were reported. Many of these cases were not new ones but were reported by the physicians who attended the conference after the necessity for reporting all cases had been brought to their attention by the mayor.

A total of 29 cases had been reported up to Wednesday evening. Twelve more were reported up to noon yesterday, while 22 more were reported during the afternoon, bringing the total up to last night to 64. Eight new cases had been reported up to 10 o'clock this morning and 9 more reported up to the time The Star goes to press, making a total of 81 cases in the city.

Flu Ban Goes on Again; Schools Closed at Noon

Acting Medical Health Officer R. B. C. Thomson clamped on the 'flu lid in Lethbridge at noon today, Monday. So he informed the Herald at 10 o'clock this morning.

"A great many new cases have been reported this morning and there is no other course to take," declared Dr. Thomson.

The Health Board met Saturday and weighed on the advisability of a closing order. The matter was left in the hands of the Acting Medical Health Officer to take whatever action he deemed necessary. This morning he took action under the following section of the Order-in-Council of Oct. 17:

"As soon as Spanish Influenza or Epidemic Influenza shows a disposition to spread in any city, town or village or municipal district, every Medical Health Officer shall immediately order the

closing of all schools, churches, theatres, picture shows, public meetings and all other places within its jurisdiction where the public gather or congregate and shall prohibit unnecessary gatherings of people in stores, street corners or other public places."

There are now about 100 houses in quarantine in the city. One death has occurred.

Dr. Thomson said he had no power to close the pool halls or stores.

POOL ROOMS CLOSED

On first hearing the report the theatre men of the city were going to fight the order on the ground that the pool rooms and other places where people congregated were not being closed. Later, however, the pool rooms were included in the order and the theatre managers reluctantly decided to abide by the order.

New Influenza Record For the City of Halifax

The Number of Cases Reported by Fifteen of
the Doctors is 239.—Hospital
Accommodation.

HALIFAX, October 29—A new record for influenza cases was recorded by the health authorities yesterday, a total of 239 cases being recorded by the health authorities doctors from nine o'clock yesterday up until six o'clock last night. There are yet a large number of reports to be received. The unexpected big jump in civilian cases in Halifax yesterday is likely to continue during the present week as, according to some medical men, the apex has not yet been reached. Since the disease was first discovered here there has been almost a continuous daily increase in the number of new cases, but the number reported yesterday is the largest for any single day yet. The civilian cases reported yesterday affect 129 homes or nearly two hundred families as in many instances more

than one family reside in the same house. Fifty-three military cases were reported. The disease has reached the epidemic stage in Halifax. It is not confined to any particular portion of the city. It appears to be widespread as reports show that cases exist on Barrington, Allen, North Park, Shirley, Harris, Bloomfield, Merkle, Grafton, South, Blowers, South Kline, Dresden Row, Market, Morris, South Park, Brussels, Starr, Queen, Argyle, Lower Water, Henry, Sackville, Creighton, Robie, Cornwallis, Maynard, Brunswick, Maitland, Gittingen, North, John, and in many of the relief tenements on the Commons and the Exhibition grounds.

THE health board are making every effort to cope with the disease and their efforts to date have no doubt been responsible for the low mortality rate, altho the provincial health officer reports fifty-three deaths from the disease since it was first discovered here. This does not include the number of persons who have died in Dartmouth and in other parts of the county. In many of the outside places the disease is reported to be on the wane. In Halifax it appears to be at its height and during the next few days reports of many cases are expected. The work of placarding all houses continues, but the increase in the disease is making it difficult to keep up with the work with a limited staff.

THE health board is rushing work on the Willow Park reconstruction camp which is being converted into a hospital exclusively for influenza patients. The undertaking has proven to be a big one, but is being carried out without delay and before the end of the week will likely be ready for the acceptance of patients. The alterations and improvements being made in the building is under the direct super-

ALL TRAINS FROM EAST WILL BE INSPECTED TO PREVENT "FLU" SPREAD

In spite of the extraordinary precautions taken by city and provincial health authorities, the number of cases of Spanish influenza has increased rapidly in Winnipeg within the last 24 hours.

Since 3 o'clock Tuesday afternoon, three persons have died and 48 new cases of the disease have been reported to the city health department.

Provincial Health Dept. Advises What To Do If It's Spanish Flu

The Interior News has received a circular issued by the provincial board of health, containing particulars regarding the epidemic of Spanish Influenza and

the general precautions to be taken, with the request that we give it some publicity. Here is what it says:—

"People are very much given to underrating the effect of this disease and to regard it more as a common cold. It is very infectious, and you owe it to yourself and to your neighbors to do all you can to avoid catching it. If you do catch it, your duty to your neighbors is to prevent them catching it from you.

"It begins as a common cold, headache, pains in the muscles, chills, feeling of cold in the head, soreness of the throat, fever.

"Keep warm, send for the doctor, and keep the other members of the family out of the room. If the children

complain, keep them at home, and remember, if care is not taken, that the after effects of the disease are the cause of the deaths.

"Isolation of the patient will prevent the spread of the disease. Avoid needless crowding; influenza is a crowd disease. Smother your coughs and sneezes; others do not want the germs you are trying to throw away.

"Your nose, not your mouth, was made to breathe through. Keep a clean mouth, clean skin, clean clothes. Open the windows, always, at home at night: at the office when practicable.

"Your fate may be in your own hands; wash your hands before eating. Do not use a napkin, towel, spoon, cup or glass which has been used by others and not thoroughly washed.

Remember, the danger is chiefly in the after effects.
